ENERGY EFFICIENCY UPGRADE OF STREET LIGHTS IN LEPHALALE TOWN AND HIGH MAST LIGHTS IN THE SELEKA VILLAGES STARTED YESTERDAY

Lephalale Local Municipality is proud to announce that the upgrade of fifteen high mast lights in the Seleka villages officially started yesterday as part of our ongoing Energy Efficiency Project.

Meanwhile, the retrofitting of 419 street lights in Lephalale Town is scheduled to begin within the next two weeks. This important initiative aims to brighten our streets while conserving precious energy and reducing costs.

WHY IS THIS IMPORTANT?

The LED lights consume 40% less power than our current lighting, which means significant energy savings and a smaller carbon footprint with a longer lifespan, lasting three years more than traditional bulbs. These LEDs reduce maintenance frequency, saving taxpayers time and money. This upgrade supports a greener, smarter, and more sustainable Lephalale for all residents and future generations.

Together, we're lighting the way to a brighter, more energy-efficient future.

the safe movement of people and goods in the province.
